

A rich brown colour for
your treated timbers

TanatoneTM

**PRESSURE TREATED TIMBER
WITH BUILT-IN COLOUR**

...ideal for rough sawn fencing
and landscaping timbers

- The brown colours of TANATONE treated timber are an alternative to the initial pale green colouration of TANALITH treated timber. Upon external exposure the brown colour slowly weathers to a warm honey brown colour and in the longer term becomes a natural silver grey. If required the brown colour can be refreshed with a suitable brush-on product such as our RESTOL.
- TANATONE is an additive to the usual industrially applied TANALITH preservative treatment which offers long term protection against decay and insect attack.
- TANATONE treatment is often used for rough sawn fencing and landscaping timbers for either Use class 3 or 4 situations as well as a treatment option for timber claddings and decking.
